

## Straighten the tank up

- 1/ In order to avoid twisting the cheminee, fasten 2 straps with the fork lift to the hoisting buckles situated on the top of the tank (or use a hoisting rudder for the smaller tanks)
- 2/ Fasten 2 straps with a second fork lift to two feet using the buckle screws

- 3/ Untie the tank from its wooden cradle
- 4/ Lift both sides horizontally so the tank lies 30 cm from the ground
- 5/ The first fork lifts the top of the tank so as to put it in a vertical position meanwhile the second fork prevents the legs to touch the ground
- 6/ When the tank stands, untie the second fork lift that is strapped to the legs.

- 7/ Install the tank in its final location and unstrap it from the fork lift. The tank must be anchored to the ground by its attachment plates.
